About this Document

This document provides a comprehensive list of LEI data fields used in the financial industry for various regulatory and compliance purposes. It offers detailed information of each LEI data field, including its field name, function, data type, field format, validations, and cardinality.

In addition, this document includes a list of mapping identifiers (such as BIC, ISIN, S&P Company ID, MIC, and Open Corporates ID) associated with the LEI.

The main purpose of this document is to provide a concise overview of all available fields and their representation across different domains (LEI Search, GLEIF API, Common Data File (CDF) formats) and the way they correspond to one another.

Change History

This section records the history of all changes to this document.

1 Level 1 Data: LEI-CDF Format 3.1

The Level 1 data refers to the first level of data or the primary dataset in the Legal Entity Identifier Common Data File (LEI-CDF) format version 3.1.

The level 1 data contain information, for e.g. the official name of a legal entity and its registered address. It provides the answer to the question of 'who is who'.

For more details, please refer to: <https://www.gleif.org/en/about-lei/common-data-file-format/current-versions/level-1-data-lei-cdf-3-1-format>

1.1 Level 1 – LEI–CDF (v 3.1)

The following table outlines the representation of Level 1 data fields in various formats, including Common Data File (CDF) formats, LEI Search, GLEIF API, and Golden Copy Files (CSV, JSON, XML).

Please note that the GLEIF Concatenated files adhere to the CDF Format, as specified in the first column of the table provided below.

Please note that the “Entity-Name”, “Entity – Legal Address”, “Entity - Headquarters Address” and subsequent headings highlighted in the table below are included to improve the document’s structure and aid in document navigation and these headings are not part of the CDF format.

LEI Data Field				Description	Enumeration Values	Data Type	Validations Data	Cardinality
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)					
LEI								
LEI	LEI Code	lei	LEI	The LEI code is a 20-character, alpha-numeric code that defines the ISO 17442 compatible identifier for the legal entity.	NA	String	LEIType	[1,1]
			.lei					
			/lei:LEIData/lei:LEIRecords/lei:LEIRecord/lei:LEI					
Entity – Name								
LegalName	(Primary) Legal Name	entity.legalName	Entity.LegalName	The Legal Name of the legal entity.	NA	String	Tokenized500Type	[1,1]
			entity.legalName.name	The legal name of a legal entity refers to the official name under which a business or organization is registered with government authorities.				
			/lei:Entity/lei:LegalName					

LEI Data Field				Description	Enumeration Values	Data Type	Validations Data	Cardinality
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)					
				<p>This name is typically used for legal, and regulatory purposes.</p> <p>For example, Global Legal Entity Identifier Foundation</p>				
OtherEntityNames	Other Names	entity.otherNames	Entity.OtherEntityNames.OtherEntityName	<p>An optional list of other names (excluding transliterations) for the legal entity.</p> <p>The OtherEntityNames element is a container including one or more other names for the Legal Entity together with a specification of a name type.</p>	NA	String	Tokenized500Type	[0,1]
			entity.otherNames.name					
			/lei:OtherEntityNames/lei:OtherEntityName					
TransliteratedOtherEntityNames	Transliterated Names	entity.transliteratedOtherNames	Entity.TransliteratedOtherEntityNames.TransliteratedOtherEntityName	<p>An optional list of ASCII transliterated (i.e., Latin- or Romanized) representations of names for the legal entity. The</p>	NA	String	Tokenized500Type	[0,1]
			entity.transliteratedOtherNames.name					

LEI Data Field				Description	Enumeration Values	Data Type	Validations Data	Cardinality
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)					
			/lei:TransliteratedOtherEntityNames/lei:TransliteratedOtherEntityName	TransliteratedOtherEntityNames element is a container including one or more transliterated names for the Legal Entity together with a specification of the transliteration procedure.				
Entity - Legal Address								
LegalAddress	Legal	NA	NA	The address of the legal entity as recorded in the registration of the legal entity in its legal jurisdiction.	NA	String	Tokenized500Type	[1,1]
			NA					
			NA					
FirstAddressLine	Legal	entity.legalAddresses.line1	Entity.LegalAddress.FirstAddressLine	The mandatory first address line element of the legal address.		String	Tokenized500Type	[1,1]
			entity.legalAddress[*].addressLines [0]					
			/lei:LegalAddress/lei:FirstAddressLine					

LEI Data Field				Description	Enumeration Values	Data Type	Validations Data	Cardinality
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)					
Address Number		entity.legalAddress.addressNumber	Entity.LegalAddress.AddressNumber	Additional structured version of an external house number, or range of numbers, contained in one of the address line elements. This could be a numeral, a letter or code made up of mixed characters (e.g., 221B). This is an optional field.		String	Tokenized500Type	[0,1]
			entity.legalAddress.addressNumber					
			/lei:LegalAddress/lei:AddressNumber					
Address Number WithinBuilding		entity.legalAddress.addressNumberWithinBuilding	Entity.LegalAddress.AddressNumberWithinBuilding	Additional structured version of an internal location number, or range of numbers, contained in one of the address line elements. This could be a numeral, a letter or code made up of mixed characters (e.g., 13) of a floor, suite or apartment within a building identified e.g., by an AddressNumber. This is an optional field.		String	Tokenized500Type	[0,1]
			entity.legalAddress.addressNumberWithinBuilding					
			/lei:LegalAddress/lei:AddressNumberWithinBuilding

2 Level 2 Data: Relationship Records (RR) CDF Format 2.1

The Legal Entity Identifier (LEI) data pool includes ‘Level 2 data’ to answer the question of ‘who owns whom’. Specifically, legal entities that have or acquire an LEI report their ‘direct accounting consolidating parent’ as well as their ‘ultimate accounting consolidating parent’.

The child legal entity are obliged to provide the LEI, respectively, of its direct and ultimate parent to the LEI issuing organization. The Relationship Record CDF (RR-CDF) format applies to relationship records for LEI registrants whose direct and ultimate parents have obtained an LEI. It defines the technical format which specifies how Level 2 data, i.e. relationship records, is stored and transferred between LEI issuing organizations, the Global Legal Entity Identifier Foundation (GLEIF) and all users of the data.

The RR-CDF format contains elements which, respectively:
Identify the legal entities involved.

- Specify the type and other characteristics (e.g. dates) of the relationship.
- Show relationship validation and reporting information collected by the
- LEI issuing organization responsible for managing the relationship record.

For more details, please refer to: <https://www.gleif.org/en/about-lei/common-data-file-format/current-versions/level-2-data-relationship-record-rr-cdf-2-1-format>

2.1 Level 2– RR–CDF (v 2.1)

The following table outlines the representation of Level 2 relationship records data fields in various formats, including Common Data File (CDF) formats, LEI Search, GLEIF API, and Golden Copy Files (CSV, JSON, XML).

Please note that the “Relationship Records- Relationship”, and “Relationship Records- Registration” headings in the table below are included to improve the document’s structure and aid in document navigations and these are not part of the CDF format.

3 Level 2 Data: Reporting Exceptions (repex)

Format 2.1

The Legal Entity Identifier (LEI) data pool includes 'Level 2' data to answer the question of 'who owns whom'. Specifically, legal entities that have or acquire an LEI report their 'direct accounting consolidating parent' as well as their 'ultimate accounting consolidating parent'.

Records in the Reporting Exceptions format refer to a child legal entity and its direct or ultimate parent and mention the type of reporting exception.

In other words, the Reporting Exceptions contains a list of reporting exceptions, with reason(s) for each exception, provided by legal entities, for declining to provide specified classes of relationship information.

Reporting exceptions are as follows:

- There is no parent entity.
- The child legal entity opts out of reporting for exceptional reasons.
- Parent entities do not have an LEI.

3.1 Level 2– Reporting Exceptions–CDF (v 2.1)

The following table outlines the representation of Level 2 reporting exceptions data fields in various formats, including Common Data File (CDF) formats, LEI Search, GLEIF API, and Golden Copy Files (CSV, JSON, XML).

Please note that the “Reporting Exceptions – Exceptions” heading in the table below is included to improve the document structure and aid in document navigation and is not part of the CDF format.

LEI – Reporting Exceptions Data Fields				Description	Enumeration Values	Data Type	Validations Data	Cardinality
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)					

Reporting Exceptions– Exception

LEI	NA	lei	LEI exceptions:LEI /repex:ReportingExceptionData/repex:ReportingExceptions/repex:Exception/repex:LEI	The ISO 17442 compatible identifier for the legal entity which raised this exception.	NA	String	LEIType	[1,1]
ExceptionCategory	NA	category	Exception.Category exceptions:ExceptionCategory /repex:ReportingExceptionData/repex:ReportingExceptions/repex:Exception/repex:ExceptionCategory	A category of mandatory information reporting, beyond the minimum required for legal entity identification, which the legal entity declines, giving reasons and references where applicable.	ExceptionCategoryEnum The enumeration values are as follows: <ul style="list-style-type: none"> DIRECT_ACCOUNTING_CONSOLIDATION_PARENT ULTIMATE_ACCOUNTING_CONSOLIDATION_PARENT 	String	NA	[1,1]

LEI – Reporting Exceptions Data Fields				Description	Enumeration Values	Data Type	Validations Data	Cardinality
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)					
ExceptionReason	Reporting Exception	reason	Exception.Reason	A single reason provided by the legal entity for declining to provide the mandatory report of a specified type of information (beyond the minimum reference data needed purely for identification of the legal entity).	ExceptionReasonEnum	String	NA	[1,*]
			exceptions:ExceptionReason					
			/repex:ReportingExceptionData/repex:ReportingExceptions/repex:Exception/repex:ExceptionReason					
ExceptionReference	NA	reference	Exception.Reference	References of the law, regulation, or other element of the legal framework to support reason(s) provided by the legal entity for declining to provide information on its parents.	NA	String	Tokenized500Type	[0,*]
			Exceptions: ExceptionReference					
			/repex:ReportingExceptionData/repex:ReportingExceptions/repex:Exception/repex:ExceptionReference

NextVersion	Relationship Period Start Date	NA	NA	A structure for adding further elements in to the Reporting Exceptions section of the Reporting Exceptions Record in anticipation of a new version, by nesting a series of XML elements with this content model within the NextVersion element, one for each new minor version of the schema, postpending a serial number (1,2,3...) to the element name upon each iteration.	NA	String	ReportingExceptionNextVersionType	[0,*]
Extension	NA	NA	NA	The repex:Extension element may contain any additional elements required to extend the Reporting Exception. For example, DeletedAt	NA	String	ExtensionType	[0,1]

4 LEI - Mapping Data Fields

The Global Legal Entity Identifier Foundation (GLEIF) has established a free of charge certification process – the GLEIF Certification of LEI Mapping service - to ensure that organizations which map the LEI to their own identifiers use state of the art methodologies and / or processes to do so accurately.

Certification, and the subsequent publication by GLEIF of publicly available, open-source relationship files which match the mapping partner identifiers against corresponding LEIs, eases the process of gathering, aggregating and reconciling counterparty information. This can be useful for many purposes including compliance; regulatory reporting; client relationship management; and due diligence.

The overall purpose of mapping LEI to mapping partner identifiers is to achieve transparency of the legal entity and ensuring data accuracy across the financial system.

GLEIF publishes the following LEI Mapping files:

- [ISIN LEI](#)
- [BIC LEI](#)
- [MIC LEI](#)
- [OC LEI](#)
- [SP Global LEI](#)

For more details, please refer to: <https://www.gleif.org/en/lei-data/lei-mapping>

LEI-Mapping Fields				Description
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)	
NA	ISIN Code	isins	NA	The ISIN is the recognized global standard for unique identification of financial instruments, e.g., securities. The term commonly refers to any form of financial instrument, but its legal definition varies by jurisdiction.
			NA	For example, an ISIN code issued by Commerzbank is DE000CV26046. To download the isin-lei mapping file for a specific date, please use the below API call format:
			NA	https://isinmapping.gleif.org/api/v2/isin-lei/YYYY-MM-DD/download . Here, 'YYYY' denotes the year, 'MM' denotes the month, and 'DD' denotes the date. For example, isin-lei mapping files for 03, February 2023 can be retrieved as: https://isinmapping.gleif.org/api/v2/isin-lei/2023-02-03/download

LEI-Mapping Fields				Description
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)	
NA	MIC Code	mic	NA	<p>The MIC (ISO 10383) is an international standard developed by the International Organization for Standardization (ISO) to identify exchanges, trading platforms, regulated or non-regulated markets and trade reporting facilities as sources of prices and related information. For example, the MIC code for the Commerzbank is CBKA.</p> <p>To download the mic-lei mapping file for a specific month, please use the below API call format: https://mapping.gleif.org/api/v2/mic-lei/YYYY-MM. Here, 'YYYY' denotes the year and 'MM' denotes the month.</p> <p>For example, mic-lei mapping files for February 2023 can be retrieved as: https://mapping.gleif.org/api/v2/mic-lei/2023-02</p> <p>To download the latest mic-lei mapping file , please use the below API call format: https://mapping.gleif.org/api/v2/mic-lei/latest/download</p>
			NA	
			NA	

LEI-Mapping Fields				Description
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)	
NA	BIC Code	bic	NA	<p>The BIC (ISO 9362) is an international standard developed by the International Organization for Standardization (ISO) for the identification of institutions within the financial services industry. SWIFT is the registration authority for the BIC standard appointed by ISO. In this role, SWIFT receives BIC registration requests, assigns a BIC, and publishes the related BIC data record.</p> <p>For example, the BIC code for the Commerzbank is COBADEFFXXX.</p> <p>To download the bic-lei mapping file for a specific date, please use the below API call format: https://mapping.gleif.org/api/v2/bic-lei/YYYY-MM. Here, 'YYYY' denotes the year and 'MM' denotes the month.</p> <p>For example, bic-lei mapping files for February 2023 can be retrieved as: https://mapping.gleif.org/api/v2/bic-lei/2023-02</p>
			NA	
			NA	

LEI-Mapping Fields				Description
CDF	LEI Search	GLEIF API	Golden Copy Files (CSV, JSON, and XML)	
NA	S&P Global Company ID The S&P Global Company ID-to-LEI mapping is automatically displayed in the LEI Search and is updated weekly.	spglobal	NA	<p>The S&P Global Company ID is the primary key in S&P Global Market Intelligence’s Cross Reference Services. The S&P Global Company ID-to-LEI relationship is built upon a mapping process established by S&P Global Market Intelligence and certified by GLEIF.</p> <p>The availability of the S&P Global Company ID-to-LEI relationship makes it easier for financial institutions and public authorities to conduct risk analysis, compliance, KYC, regulatory reporting, etc.</p> <p>For example, the S&P Global Company ID for the Commerzbank is 410710.</p>
			NA	
			NA	
NA	OpenCorporates ID	ocid	NA	<p>The Open Ownership Register ID provide an open database of the corporate world.</p> <p>The mapping of Open Ownership Register ID with the LEI promotes greater transparency in corporate ownership and control in support of safer, faster, and more efficient payment activities globally and a more secure financial landscape.</p> <p>For example, the OpenCorporates ID for the Commerzbank is <u>de/M1201_HRB32000</u>.</p>
			NA	
			NA	

LEI-Mapping Fields				Description

				<p>To download the Open Ownership Register ID -LEI (oc-lei) mapping, please use the below API call format: https://mapping.gleif.org/api/v2/oc-lei</p> <p>To download the latest oc-lei mapping file , please use the below API call format: https://mapping.gleif.org/api/v2/oc-lei/latest</p>

5 Supporting Documents

5.1 XML Schema Definitions

Supporting technical specification documents and the corresponding XML schema definitions for all the current versions of the Common Data File (CDF) formats are available for download at: <https://www.gleif.org/en/about-lei/common-data-file-format/current-versions/supporting-documents>

5.2 Example Files - Golden Copy (XML,JSON, CSV)

Supporting sample files (XML, JSON, and CSV) for Golden Copy file of all the current versions of the Common Data File (CDF) formats are available for download at: <https://www.gleif.org/en/about-lei/common-data-file-format/current-versions/supporting-documents>

5.3 Example Files - Concatenated Files (XML)

Supporting sample files (XML) for Concatenated file of all the current versions of the Common Data File (CDF) formats are available for download at: <https://www.gleif.org/en/about-lei/common-data-file-format/current-versions/supporting-documents>

5.4 Example Files - GLEIF API Response

Supporting sample GLEIF API response files are available for download at: <https://www.gleif.org/en/about-lei/common-data-file-format/current-versions/supporting-documents>

6 Glossary

6.1 Glossary

Term	Description	Maximum Length	Minimum Length	Data Pattern
Tokenized500Type	An element of this type has minimum length of one character and may not contain any of: the carriage return (#xD), line feed (#xA) nor tab (#x9) characters, shall not begin or end with a space (#x20) character, or a sequence of two or more adjacent space characters.	500	1	"\S+(\ \S+)*" The "\S+(\ \S+)*" pattern means it must start and end with a character other than space and in between one space must be surrounded by non-space characters.
RegionCodeType	A 4- to 6-character ISO 3166-2 region code of the region.	6	4	"([A-Z]{2}-[A-Z0-9]{1,3})"
CountryCodeType	A current code from the ISO-approved list SHALL be used. For more details, please see: http://www.iso.org/iso/home/standards/country_codes.htm .	2	2	"([A-Z]{2})"
LEIDateTimeProfileGeYear0001	The dateTime datatype represents a specific instant of time. Here, this indicates a date greater or equal to 1st January 0001	-	-	[\d]{4}-([\^\.]* ([\^\.]*\(\d{1,3}\)){0,1})Z \+(\[01][0-9] 2[0-3]):([\d]{0-5}[0-9]) ([\d]{0-9} 2[0-3]):([\d]{0-5}[0-9])
LEIType	An element of this type has minimum length of one character and may not contain any of: the carriage return (#xD), line feed (#xA) nor tab (#x9) characters, shall not begin or end with a space (#x20) character, or a sequence of two or more adjacent space characters.	20	20	([0-9A-Z]{18}[0-9]{2})

Term	Description	Maximum Length	Minimum Length	Data Pattern
NodeType	An LEI or ISO 17442-compatible ID for the entity.	20	20	([0-9A-Z]{18}[0-9]{2})
